

Participants

Robert O. Blake is chairman of the Committee on Agriculture Sustainability for Developing Countries at the World Resources Institute and has had a long career in environment, water resource management, policy, and diplomacy.

Gonzalo Castro is executive director, Wetlands for the Americas, which focuses on the protection and restoration of wetland habitats in North, South, and Central America.

Jim Ellis is director for Environment and Sustainable Agriculture at Winrock International. Formerly he was with the Natural Resource Ecology Laboratory at Colorado State University. He specializes in multidisciplinary ecosystem-level studies aimed at exploring the interface between environment and development.

Peter Gleick is director, Pacific Institute for Studies in Development, Environment, and Security. The Pacific Institute researches the linkages among economic development, global environmental problems, and international security. He has directed studies regarding the impacts of global climate change on water resources, the security conflicts arising from transboundary water disputes, and strategies to combat drought and water scarcity.

Don Gray is senior fellow and water program director at the Environmental and Energy Study Institute. EESI briefs Congress on issues related to environment, energy, and sustainable development. He was instrumental in getting Congressional support of U.S. involvement in the U.N. Earth Summit.

David Groenfeldt is a senior associate with Associates in Rural Development, a private consulting firm providing services in the areas of agriculture, natural resources, energy, rural development, and environmental affairs. He has researched irrigation issues in South and Southeast Asia focusing on institutional aspects of irrigation management.

Robert Havener is president of Winrock International. Prior to Winrock, he was director general of the International Maize and Wheat Improvement Center in Mexico, worked for the Ford Foundation in Asia, primarily in Pakistan, and then was responsible for the foundation's Asian agriculture program. He has also worked in the Middle East and North Africa on the Arid Lands Agricultural Development program, funded by the Ford Foundation.

Bruce Larson is a visiting fellow in Winrock's Center for Economic Policy Studies, on leave from the Economic Research Service of the U.S. Department of Agriculture.

Gilbert Levine is professor emeritus at Cornell University and a senior associate for the International Irrigation Management Institute. He is a consultant on issues concerning irrigation, the environment, and development.

Ruth Meinzen-Dick is a research fellow at the International Food Policy Research Institute. She is currently working on socioeconomic aspects of irrigation performance in India, Pakistan, and Zimbabwe.

Deborah Moore is staff scientist, International Program, Environmental Defense Fund. EDF advocates reform of the multilateral development banks lending practices toward more socially and environmentally sound development. She has conducted research on the cost effectiveness of small-scale irrigation projects in India, trends in World Bank investments in the water sector, and technical critiques of water projects financed by multilateral development banks.

Steve Parcels is director, International Water Program, National Audubon Society. He focuses on the impacts of water development on wetlands and water-dependent habitats both in the U.S. and overseas. He has advocated changes to the Bangladesh Flood Action Plan, and recently, as chair of the Everglades Coalition, organized a conference on the restoration of the Florida Everglades.

N. S. Peabody, III, Winrock International, is chief of party for the Environmental and Natural Resources Policy and Training Project technical assistance component. Before joining Winrock, he held the position of senior water management specialist in the Bureau for Asia and the Near East, USAID.

Sandra Postel is vice president for research at Worldwatch Institute, a nonprofit research institute focused on global environmental trends. She has published widely on international water issues.

Mike Rock is senior vice-president of the Institute for International Research. He is a development economist with extensive experience in Asia, and teaches economics at Bennington College.

Peter Rogers is professor of environmental engineering at Harvard University. He has published widely on improved methods for managing natural resources and the environment, with emphasis on the use of analytic optimizing methods to incorporate both the natural phenomena and the engineering controls.

David Seckler is the director of the Center for Economic Policy Studies and the Water Resources and Irrigation Policy Program at Winrock International. He is professor emeritus of agricultural economics at Colorado State University. He has spent 7 years working in Asia and recently has been working on African economic development.

Leonard Sklar is research director, International Rivers Network, which is dedicated to protecting and restoring the world's rivers through promoting sustainable development alternatives, networking with NGOs worldwide, and providing information on water-related projects. He has studied the impacts of the World Bank-financed Bangladesh Flood Action Plan.

Mark Svendsen is a research fellow at the International Food Policy Research Institute with a joint appointment at the International Irrigation Management Institute. He has focused on irrigation systems and performance in Sri Lanka, India, the Philippines, and Zimbabwe.

Frank Tugwell is vice president for programs in the Washington D.C. regional office of Winrock International. He was formerly director of the Renewable Energy and the Environment Program and Environmental Enterprises at Winrock International.

Vicki Walker is a program associate in the Center for Economic Policy Studies, Winrock International and participates in the Water Resources and Irrigation Policy Program. She also manages the African Rural Social Sciences Research Networks program at Winrock.

Michael Warren is a professor of anthropology at Iowa State University and has studied indigenous agricultural practices and their potential. He is director of the Center for Indigenous Knowledge in Agriculture and Rural Development.

Chris Wozencraft works in Winrock's Center for Economic Policy Studies. He has studied endangered species in Madagascar and has worked on biodiversity training and research programs in China during the last 5 years.

Montague Yudelman is a fellow at the World Wildlife Fund. He was formerly director of agriculture at the World Bank
